

Water consumption in hotels

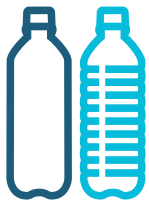

and its current situation

Did you know that ...

a hotel guest can consume on average between **100 and 200 gallons of water per day**, which equals approximately

73,000 gallons of water by room, each year.

in 2018, **several international hotel chains** used a total of

20 million

PET bottles of water in **Europe, Asia and Africa.**

38.8% of hotels have a **water-saving system** in place, mainly used **for shower installations.**

Features of a sustainable hotel

- **WATER** - Water-saving devices are installed in faucets and water tanks

- **AWARENESS CAMPAIGNS** - Promotes lower water consumption, which applies for guests and hotel staff

- **LIGHTING** - Replacing fluorescent tubes with LED technology in common areas, rooms, exterior areas, signs, etc.

- **SMART AIR CONDITIONING** - Reduces unnecessary use of air conditioning by 50%, using a smart programmable system

Did you know that ... it is common for hotels **to install drinking fountains** to provide their guests with **drinking water.**

More than **30 international chains** within the hotel industry are providing **drinking fountains** as a healthier option of **drinking water consumption.**
