

ELKAY[®]

A Great Water Filter Against Bacteria

35,000-gallon Bacteria Water Filtration System

This water filtration system reduces aerobic mesophilic bacterial organisms and coliform bacteria, chlorine and odors for healthy and great tasting water.

A GREAT WATER FILTER AGAINST BACTERIA

This water filtration system offers carbon block and filter membrane technology for an ultrafiltration process that reduces particles and microorganisms of up to .2 microns by mechanical means. It also effectively reduces odor, taste and chlorine.

Its quick-change technology allows for an easy filter replacement, and prevents external components from being exposed to contamination through contact.

This system is perfect for high traffic areas and operates with an external installation with our drinking fountains and bottle filling stations.
